Range	Pass- word	Description	Described in
Installation / com- missioning	2100	Setting all basic parameters (for example time / date).	Installation in- structions
CO ₂ gas calibra- tion	999	Verification and calibration of exhaust emissions. Only for energy type - gas.	Installation in- structions
Network settings	2100	Input network addressing. Only for units with touch- screen control.	Installation in- structions
Basic settings / user	111	Setting of basic values for the user, functions, software up- date.	
Lockscreen	369	Deactivating the lockscreen in cooking mode. Only for units with touchscreen con- trol.	
Trade show mode	888	Activation / deactivation for service inst exhibition mode.	
Service menu	1967	Service range for authorized Service instruc- service technicians.	

2 Introduction

2.1 About this manual

	This service manual contains information needed by the service technician for professional and correct fault isolation, repair and maintenance of the unit. The service technician must also observe the contents of the installation instructions and the user manual.
Target group	Target group for this service manual is trained specialists who are familiar with the technical functioning and operation of the unit.
Figures	All figures in this service manual are intended as examples. Discrepancies can arise between this and the actual unit.

2.2 Warranty

The warranty is void and safety is no longer assured in the event of:

- Modifications or technical changes to the unit,
- Improper use,
- Incorrect startup, operation or maintenance of the unit,
- Problems resulting from failure to observe these instructions.

3 Safety instructions

For servicing tasks, the service technician must be familiar with and observe regional regulations.

In addition, the notes in the service manual must be observed.

	Danger to life due to electric current
	 Disconnect power prior to performing gas and electrical work. Disconnect unit from the mains supply and secure it against restart. Check to ensure absence of voltage
	Risk of fatal injury from gas
▲ DANGER	 Risk of fatal injury from gas ✓ Disconnect the unit from gas supply prior to performing gas installation tasks.

### **5.4 CombiDoctor**

**Description** The CombiDoctor offers an automatic check of the climate control and the WaveClean automatic cleaning. The tests are possible individually or as overall test. For instructions on performing, see the touch screen.

Overview	START h:min	Fair ? 12:46
	Device information Status information CombiDoctor Relay test	CombiDoctor 0 Climate & WaveClean 1 Climate 2 WaveClean Running time: 00:09

**Selecting a program**  $\rightarrow$  Select a program by adjusting the roller.

Program description 1 Climate

Automatic checking of the following areas/components

- Heating circuit
  - Heating body, failure of a phase (only for energy type electric)
  - Semiconductor relay SSR (only for energy type electric)
  - Gas system (only for energy type gas)
  - Temperature control
  - DynaSteam steaming unit
  - Air inlet flap

#### 2 WaveClean

- Automatic checking of the WaveClean cleaning
  - WaveClean pump (circulation pump)
  - Siphon pump (drainage pump)
  - Magnetic valve for water vapor elimination & siphon filling
  - Reed contact switch of the cooking chamber door
- **Starting the program**  $\rightarrow$  Touch the "START" field.
  - **Evaluation**  $\rightarrow$  The test result appears on the touch screen.
    - $\hookrightarrow$  Entry in HACCP memory.

### 5.5 Relay test

- **Description**  $\rightarrow$  Separate control of the relay.
  - $\hookrightarrow$  Testing the relay.
  - ightarrow Testing the connected components.

### INFORMATION

Relays K1 and K16 are switched on permanently. A plurality of relays are switched on simultaneously.

### Overview

Image: Relay test page 1

### 5.6 WaveClean test (option)

Overview	START h:min
	WaveClean test         100°C and CT         calibration         DynaSteam test         Fempty water             WaveClean test             Before the start:             1. Remove cooking container         2. Clean drain sieve         3. Remove food residues         4. Close door
Description	<ul> <li>→ WaveClean test program for function check.</li> <li>→ Circulation pump</li> <li>→ Siphon pump</li> <li>→ Magnetic valve for water filling</li> <li>→ Door seal / leak tightness in door area</li> </ul>
INFORMATION	ollow the instructions on the touch screen. he test is used exclusively for functional testing and not to clean the cooking hamber.
Starting the test	<ul> <li>→ Touch the "START" field.</li> <li>→ Checking of the cooking chamber temperature.</li> <li>→ Automatic cooling off of the cooking chamber if &gt; 70°C.</li> <li>→ Rinse and fill up siphon.</li> <li>→ Draining by pump G24.</li> <li>→ Filling by magnetic valve K12.</li> <li>→ Circulation and heating.</li> <li>→ The circulation pump G16 is switched on.</li> <li>→ Heating of the cooking chamber to 55°C.</li> <li>→ Rinse DynaSteam and siphon</li> <li>→ DynaSteam steaming unit is switched on.</li> <li>→ Another water change from the siphon.</li> <li>After 30 minutes, the WaveCleanTest ends.</li> </ul>
Cancering the lest	<ul> <li>→ Touch the "STOPP" field.</li> <li>→ Automatic rinsing of the siphon and test cancellation.</li> </ul>

### 5.7 100°C + core temperature calibration

- Description → Calibration for cooking chamber sensor and core temperature sensor.
  - $\hookrightarrow$  Testing the calibration.

 $\rightarrow$  Performing the calibration.

The cooking chamber sensor and core temperature sensor calibration is performed in one step.

#### **INFORMATION**

The units are factory calibrated. Recalibration is required only in exceptional cases.

#### 5.7.1 Check calibration

**Prerequisite** Calibrated digital temperature measurement device. The temperature in the cooking chamber is < 100°C.  $\rightarrow$  Fix internal core temperature sensor and temperature sensor of external measurement device in the cooking chamber.  $\rightarrow$  Use a grill rack for this. → Point the sensor tips upward in order to prevent measurement errors. **Checking the calibration**  $\rightarrow$  Touch the "START" field.  $\rightarrow$  The cooking chamber is heated up to 100°C.  $\rightarrow$  Display of the current temperature on the touch screen.  $\rightarrow$  Wait until the cooking chamber temperature on the touch screen indicates 100°C (± 1°C). → Compare displayed cooking chamber temperature with temperature of external measurement device. → The external measurement device must display a temperature between 99°C - 99.5°C.  $\rightarrow$  If the value is within the range, end checking.  $\rightarrow$  Touch the "STOP" field.

- $\rightarrow$  If the value is outside of the range, calibration must be done.
- Scontinue with calibration (see "5.7.2 Calibrate cooking chamber sensor", Page 19).

5.7.2 Calibrate cooking chamber sensor				
Prerequisite	Execute Check calibration and do not switch appliance off.			
	→ (see "5.7.1 Check calibration", Page 18) → Temperature display on the touch screen indicates 100°C.			
Calibration	$\rightarrow$ Adjust offset value by adjusting the roller.			
	The external measurement device must display a temperature between 99°C – 99.5°C.			
	$\rightarrow$ If necessary, adjust offset value again.			
	└→ Let 10 minutes adjustment time elapse.			
	$\rightarrow$ If the value is within the range, save calibration.			
Saving the calibration	$\rightarrow$ Touch "Save offset" field.			
	Saving of set value.			
	→ Automatic calibration of core temperature sensor.			
Canceling the calibration	$\rightarrow$ Touch the "STOP" field.			
	$\hookrightarrow$ The calibration ends.			
Exiting the calibration	Touch the <i>Back</i> field.			
Storing the calibration on SD card	→ Also save data on internal SD card (see "5.18 Backing up data", Page 26).			

### 5.8 DynaSteam test

**Description** The DynaSteam test allows the function test of the DynaSteam steaming unit. Calibration of the steaming unit is not possible / necessary.

**Prerequisite** Access to the water supply pipe in the cooking chamber.

- $\rightarrow$  Remove both hook-in points.
- $\rightarrow$  Dismount water supply pipe.
- → Dismount air diverter.
- $\rightarrow$  Replace water supply pipe.

Overview	DunaSteam test	DunoStaam tast
		0-990 ml 0 3 1 4 0 2 5 1
	Initialisation	START

Starting the test  $\rightarrow$  Touch "Initialization" field.

- → Automatic pre-rinse.
- $\hookrightarrow$  Field changes to "START".
- $\rightarrow$  Set water quantity using the rollers.
- $\rightarrow$  Touch the "START" field.
  - → Activation of the DynaSteam steaming unit.
  - → The water comes runs from the water supply pipe into the cooking chamber.

#### **Check the water quantity** Collect the water from the supply pipe with a measuring container.

- $\rightarrow$  Starting water test.
  - → After the predetermined amount of water has gone through, the steaming unit stops automatically.
- Scompare amount of water with the set value. A deviation of +-10% is within tolerance.

### 5.9 Emptying the water

**Description** Water drainage removes water residue from the unit to prevent frost damage during transport and idle period.

- **Requirement**  $\rightarrow$  Both water connections are connected to compressed air.
  - $\rightarrow$  The pressure may not exceed 6 bar.
  - $\rightarrow$  The cooking chamber temperature is < 130°C.

Starting to drain the water  $\rightarrow$  Touch the "START" field.

- $\rightarrow$  Start of the automatic water drainage.
- → Display of the cooking chamber temperature and remaining time.

**Canceling the water**  $\rightarrow$  Touch the "STOP" field. drainage

### 5.10 Setting the set-up height

Setting the set-up height  $\rightarrow$  Set the set-up height by adjusting the rollers.

- $\rightarrow$  Touch the "OK" field.
  - $\hookrightarrow$  Changes saved.

Canceling the selection  $\rightarrow$  Touch the "Back" field.

### 5.11 Audio settings

Overview			Fair (?) 12:47

Overview		Fair ? 12:47
	Date / Time	
	Setup height Sound 2	
	Audio settings	
	tones J OK Back	
Set signal tones	ightarrow Set the signal tone by adjusting the roller	S.
	$\rightarrow$ Touch the "OK" field.	
	→ Changes saved.	
Canceling the selection	$\rightarrow$ Touch the "Back" field.	

### 5.13 POS activation

Description	Software activation for the optional connection to a customer-supplied
	performance optimization system.

### INFORMATION

An additional modification of the appliance is required. With activation without retrofitting, the heating circuit will not be activated.

### 5.14 Log data export

**Description** Log data export on an external USB stick. The function is only required after consultation.

- **Exporting log data**  $\rightarrow$  Perform according to instructions on the touch screen.  $\rightarrow$  Touch the *Confirmation* field.
  - $\rightarrow$  Log data export begins.

### 5.15 Software update

- **Description**  $\rightarrow$  Update of the software via the USB interface.
  - → Additional content (help texts, cookbooks, videos) will not be updated.

**Performing the update**  $\rightarrow$  Perform according to instructions on the touch screen and

- description .
- → Touch the "OK" field.
  - → Update begins.
- $\rightarrow$  Then a confirmation appears on the touch screen.

### 5.16 Importing additional content

**Description**  $\rightarrow$  Import of additional content (videos, graphics, help texts).

**Importing content**  $\rightarrow$  Perform according to instructions on the touch screen.

- $\rightarrow$  Touch the *Confirmation* field.
  - $\mapsto$  Import the content.
  - $\hookrightarrow$  Then a confirmation appears on the touch screen.
- $\rightarrow$  Touch the "OK" field.

### 5.17 Restoring data

**Description** Import function of parameters stored on the SD card. Required after change of control board or control panel.

**Restoring data**  $\rightarrow$  Touch the *Confirmation* field.

- $\mapsto$  Restoring of the data from the SD card.
- $\rightarrow$  Touch the "OK" field.
  - $\hookrightarrow$  Automatic restart of the software.

### 5.18 Backing up data

**Description** Export function of the parameters (for example, calibration values). Storage of the data on the internal SD card or USB stick (if present).

- **Backing up data**  $\rightarrow$  Tap the *Confirmation* field.
  - $\hookrightarrow$  Back-up of the data.
  - $\hookrightarrow$  Then a confirmation appears on the touchscreen.
  - $\rightarrow$  Tap the "OK" field.

### 5.19 Water filter maintenance

Description With use of a water filter on the soft water connection of the unit, a maintenance note may appear after the stored flow quantity has been reached. For this, the appropriate filter capacity must be determined and

entered.

- Prerequisite The water filter supplies only one combi steamer.
  - Only the soft water connection is connected to the filter.

  - 2. Touch the "OK" field.

### 5.22 Backup relay

Description	The control board has a spare relay, which allows alternative use in case of a relay failure. This is only possible with the listed relays.
Locate defective relay	$\rightarrow$ Call relay test in the service menu.
	Perform relay test. Locate defective relay by examining the output voltage at the corresponding outputs on the control circuit board.
Occupying the spare relay	$\rightarrow$ Do rewiring according to the table.
	Example: When using it for K8 (solenoid M8), rewire line from connector X17.1 to X12.5.

### **INFORMATION**

In case of changes to the wiring, label or deposit note in the unit.

Assigning the backup relay  $\rightarrow$  Select the defective relay by means of the roller.

#### $\rightarrow$ Touch the "OK" field.

 $\hookrightarrow$  Changes saved.

#### Canceling the selection Touch the "Back" field. Relay overview

Relay	Connec- tor	No.	Description	Instruction
K1	X10	2	Main contactor Q1	Reconnect the line from X10.2 to X12.5 and to as- sign a reserve relay to it.
K1	X11	1	POS A	Reconnect the line from X11.1 to X12.5 and to as- sign a reserve relay to it.
K2	X11	2	POS B	Reconnect the line from X11.2 to X12.5 and to as- sign a reserve relay to it.
К3	X12	2	Magnetic valve manual rinse	Reconnect the line from X12. 2 to X12. 5 and to assign a reserve relay to it.
K4	X12	3	Magnetic valve for water vapor elimination K12	Reconnect the line from X12.3 to X12.5 and to as- sign a reserve relay to it.
K5	X12	4	Siphon pump G24	Reconnect the line from X12.4 to X12.5 and to as- sign a reserve relay to it.
K6	X12	5	Backup relay K6	Reconnect the line from X12.5 to X12.5 and to as- sign a reserve relay to it.
K8	X17	1	Solenoid fresh air M8	Reconnect the line from X17.1 to X12.5 and to as- sign a reserve relay to it.
K17	X12	1	Circulating pump G16	Reconnect the line from X12.1 to X12.5 and to as- sign a reserve relay to it.

**Dismantling and re-** After changing the control board the original state is restored. Thus, **programming** the backup relay is not used unnecessarily.

- $\rightarrow$  Establish the original condition of the wiring (from X12. 5 to Xx).
- $\rightarrow$  Calling up the "Backup relay" in the Service menu.
- $\rightarrow$  Select "OFF" using the roller.
  - $\rightarrow$  The backup relay is deactivated.
- $\rightarrow$  Touch the "OK" field.
  - → Changes saved.

### 5.23 Status overview direct access

**Description**  $\rightarrow$  Direct access in the status overview.

 $\hookrightarrow$  Display of all processes and temperature in ongoing operation.

Overview	STOP Other Steaming 100°C Cooking time remaining: 00 _h : 30 _{min} Cooking time remaining 000 _h 29 _{min}
Calling up status overview	$\rightarrow$ Touch the invisible field three times quickly.
Exiting the status overview	<ul> <li>→ Change of the display to the multi-page status overview .</li> <li>→ Touch the <i>Back</i> field.</li> <li>→ Change to the display of the cooking process.</li> </ul>
INFORMATION	The status overview is intended only for the service technician.

### 6 Software

### 6.1 Software update

**Prerequisite**  $\rightarrow$  USB stick.

- → Maximum size 32 GB.
- $\rightarrow$  FAT formatting (default).
- $\rightarrow$  The disk should be empty if possible.
- $\rightarrow$  Current software update.
  - $\rightarrow$  The update is provided as packed ZIP file.

- **Preparing the USB stick**  $\rightarrow$  Open and download the .ZIP file and unzip. In general, the unzipped folder is in the same directory as the previously compressed one.
  - $\rightarrow$  Copy unzipped folder "MMIUpdate" to the USB stick.
    - $\rightarrow$  The update file is in the folder.
    - $\rightarrow$  The file has the extension ".ugl".
    - $\rightarrow$  For example, "012200.ugl" (software update V1.22).

### Inserting the USB stick

The USB interface is behind the cover on the bottom left of the housing.

### Software

Performing the updat	$e \rightarrow$ Switch the unit on.
Device functions	<ul> <li>→ Tap the "Appliance functions" field.</li> <li>└&gt; Display of Appliance functions menu.</li> </ul>
Settings	<ul> <li>→ Tap "Settings" field.</li> <li>→ Display of "<i>PIN</i>" window.</li> </ul>
1       2       3         4       5       6         7       8       9         .       0       ⇐	<ul> <li>→ Enter password and tap the <i>Confirmation</i> field.</li> <li>→ The password for the Settings menu is 111.</li> <li>→ Select the "Software update" field on the left area of the menu by swiping.</li> <li>→ Tap the "Software update" field.</li> <li>→ Tap the "OK" field.</li> <li>→ The update begins.</li> </ul>
INFORMATION	The update can take up to 20 minutes. The software is restarted several times. Do not switch the unit off.
	→ Then a confirmation appears on the touchscreen. → Tap the "OK" field.

 $\hookrightarrow$  The software restarts automatically.

### 6.2 Importing additional content

**Description** Import function for manufacturer contents:

- Cookbook graphics
- Help information
- Sound files

**Prerequisite**  $\rightarrow$  USB stick.

- → Maximum size 32 GB.
- $\hookrightarrow$  FAT formatting (default).
- $\hookrightarrow$  The disk should be empty if possible.
- $\rightarrow$  Current additional content.
  - $\hookrightarrow$  Additional contents are provided as packed .ZIP file.
- Preparing the USB stick → Open and download the .ZIP file and unzip. In general, the unzipped folder is in the same directory as the previously compressed one.
  - $\rightarrow$  Copy the unzipped folder "MMIContent" to the USB stick.
    - In the folder there are other subfolders. This may not be changed.

### Inserting the USB stick

The USB interface is behind the cover on the bottom left of the housing.

- → Then a confirmation appears on the touchscreen.
- $\rightarrow$  Tap the "OK" field.

### 6.3 Importing the manufacturer's cookbook

### **Prerequisite** $\rightarrow$ USB stick.

- → On the unit, the software version 1.29 (from 04/2014) or higher is installed.
  - Scheck of the software version in the unit's information (see "5.2 Appliance information", Page 10).
  - $\hookrightarrow$  If necessary, perform software update .

### Preparing the USB stick

a Update file

- b FCImport folder
- → Create "FCImport" folder on the USB stick.
- $\rightarrow$  Copy update file to the "FCImport" folder.
  - $\hookrightarrow$  The update consists of one file.
  - → The file has the wording "TouchClassicDB.sdf".

#### Inserting the USB stick

The USB interface is behind the cover on the bottom left of the housing.

## Importing the MKN cookbook

- → Switch on unit "I".
  → Tap the "Appliance functions" field.
  - → Display of *Appliance functions* menu.
- $\rightarrow$  Tap "Settings" field.
  - $\rightarrow$  Display of *PIN* window.
- $\rightarrow$  With the keyboard, enter password "111".
  - $\rightarrow$  Display of menu "*Settings*".
- → Select the field "Import MKN cookbook" on the left area of the menu by swiping.
- $\rightarrow$  Tap the "Import MKN cookbook" field.

- $\rightarrow$  Tap the *Confirmation* field.
  - $\hookrightarrow$  Import begins.
  - $\hookrightarrow$  Then a confirmation appears on the touchscreen.
- **Exiting selection**  $\rightarrow$  Tap the *Back* field.

### 7 Trade show mode

Switching

13:08

mode

Switching off trade show

Exhibition mode

is on

Description	Trade show mode allows appliance operation for demonstration purposes.
Prerequisite	<ul> <li>A single-phase power supply is required for operation.</li> <li>→ Unit is connected to L3 and N.</li> <li>→ See also installation instructions.</li> </ul>
Calling up the selection	<ul> <li>→ Switch unit to "I"</li> <li>→ Tap the "Unit functions" field.</li> <li>→ Display of <i>Unit functions</i> menu.</li> </ul>
Settings	<ul> <li>→ Tap the "Settings" field.</li> <li>→ Display of <i>PIN</i> window.</li> </ul>
1       2       3         4       5       6         7       8       9         .       0       <	→ Enter password 888 and tap the <i>Confirm</i> field. → Display of <i>Trade show</i> menu.
tching trade show mode on	
Exhibition mode is off	<ul> <li>→ Tap the "Trade show mode is off" field.</li> <li>→ Automatic restart of the software.</li> </ul>
Fair ?	<ul> <li>→ Unit is in trade show mode</li> <li>→ The active trade show mode is indicated on the screen.</li> </ul>

10015160-0ASAE-A

HENNY PENNY Engineered to Last

 $\rightarrow$  Call up the *Trade show mode* menu.

 $\rightarrow$  Unit is in normal operation.

 $\rightarrow$  Tap the "Trade show mode is on" field.

→ Automatic restart of the software.

### 9 Error messages

### 9.1 Emergency operation

**Description** In order to allows limited use in case of error, the appliance has various emergency programs. Emergency operation is activated automatically and displayed. After elimination of the error indicated, the controller switches back into regular operation automatically. A reset is not necessary.

# **INFORMATION** Emergency programs handle the limited further operation of the appliance until servicing. Deviating cooking results and temperature deviations are possible.

Overview	
Error message displayed	Description
Chamber sensor faulty.	The core temperature sensor takes over the function of the cooking chamber sensor.
Water vapor sensor defective	The software controls the water vapor elimi- nation. This results in higher water con- sumption.

### Overview

### 9.2 Cooking chamber sensor defective (694, 695)

**Description** Emergency operation is activated automatically and displayed. The core temperature sensor takes over the function of the cooking chamber sensor. Cooking program with core temperature sensor is no longer available.

**Location** The cooking chamber sensor is in the top right of the cooking chamber.

Naming on the circuit B2 diagram

**Troubleshooting** Dismount unit cover.

- $\rightarrow$  Check contacting on control board A1, X25.
- → Remove existing cooking chamber sensor from the control board A1, X25 and plug in new cooking chamber sensor.
  - → The fault message disappears. Replace cooking chamber sensor.
  - $\hookrightarrow$  The fault message is still displayed. Replace control board.

Function check The measurement values can be called up in the status overview.

### 9.3 Core temperature sensor defective (699, 700)

Description	The core temperature sensor in the cooking chamber is deactivated.	
Location	The core temperature sensor is in the front area of the cooking chamber.	
Naming on the circuit diagram	B1	
Troubleshooting	Dismount unit cover.	
	→ Check contacting on control board A X24.	
	→ Remove existing core temperature sensor from the control board A1 X24 and plug in new core temperature sensor.	
	The fault message disappears. Replace core temperature sensor.	
	ightarrow The fault message is still displayed. Replace control board.	
Function check	The measurement values can be called up in the status overview.	

### 9.4 Water vapor sensor defective (710)

**Description** The temperature sensor on the control board is measuring a temperature of >70°C. The unit is no longer operational until it cools down.

**Troubleshooting**  $\rightarrow$  Check air intake area of fan.

- $\hookrightarrow$  Clean dirty air intake area.
- → Check that cooling fan is functioning properly. To do so, use the relay test in the Service menu to switch on the cooling fan.
  - → The cooling fan does not start. Measure the voltage at the fan. Voltage present = Cooling fan defective. Voltage not present = Relay on the control board defective. Replace control board.
- → The cooling fan starts. Check surroundings and ambient temperature. See also installation instructions.

**Function check** The measurement values can be called up in the status overview.

### 9.5 Excess temperature in the cooking chamber (ID73)

Description	The measured temperature in the cooking chamber is outside the allowable range (electric power supply > $310^{\circ}$ C). The unit is no longer operational until the cooking chamber cools down. The measurement is taken by the cooking chamber sensor, core temperature sensor and the moisture sensor.		
Prerequisite	<ul> <li>No display of fault messages from the temperature sensor.</li> </ul>		
<b>roubleshooting</b> Dismount unit cover.			
	Switch unit to "I"		
	→ Measure the voltage / current consumption on the load side of the semi-conductor relay.		
	Voltage / current is present and the LED on at least one of the semi-conductor relays if off.		
	→ Semi-conductor relay is defective. Replace component and check that fan impeller is balanced.		
	→ Measure the control voltage on the input side of the semi- conductor relay.		
	Voltage is present and the LED on at least one of the semi- conductor relays if on.		
	→ Control board A1 defective. Replace component.		
Function check	The measurement values can be called up in the status overview.		

### 9.6 Overtemperature control (TMP_ID2)

Description	The temperature sensor on the control board is measuring a
	temperature of >70°C. The unit is no longer operational until it cools
	down.

- **Troubleshooting**  $\rightarrow$  Check air intake area of fan.
  - $\hookrightarrow$  Clean dirty air intake area.
  - → Check that cooling fan is functioning properly. To do so, use the relay test in the Service menu to switch on the cooling fan.
    - → The cooling fan does not start. Measure the voltage at the fan. Voltage present = Cooling fan defective. Voltage not present = Relay on the control board defective. Replace control board.
  - → The cooling fan starts. Check surroundings and ambient temperature. See also installation instructions.

### 9.7 Risk of frost (TMP_ID72)

**Description** The unit is not ready for use. The temperature sensor on the control board is measuring a temperature of <0°C.

**Troubleshooting**  $\rightarrow$  Increase the room temperature and switch on unit again.

 $\rightarrow$  Change location of the unit.

### 9.8 Fan defective or temperature limiter triggered (702) only for Compact

**Description** The control board A1 does not receive any response via the CAN bus cable from fan motor M10. There is an error in the safety circuit or fan area.

#### Overview

a Fan motor M10

b

c Power supply X1

d Connection for fan motor X2

#### Plug assignment power board

Power board T10 for fan motor

Connector X1 (c)		Connector X2 (d)	
1	L1 230V	1	320V DC+
2	Ν	2	Ground
3	PE	3	15V DC+
		4	-
		5	PFC

### 

#### Warning: electric shock! Danger of death!

When working on the power board, make sure that energized parts are exposed. Work on these components during operation and up to 3 minutes after enabling is not allows. Even if the motor is stopped and the appliance is de-energized, the connection terminals and components can conducted dangerous voltage!

Locating errors → Location of whether there is an error in the STL circuit (STL = safety temperature limiter) or in the fan area.

	→ Switch unit on and measure voltage at main contactor Q1, terminals A1 and A2. The main contactor must be energized.		
	→ No voltage present. There is an error in the STL circuit. Troubleshooting according to "Troubleshooting safety circuit".		
	Voltage present. There is an fault in the fan area. Troubleshoot according to "Troubleshooting the fan".		
Troubleshooting the safety	→ The safety temperature limiter has tripped.		
circuit	Reset the safety temperature limiter. Check semiconductor relay and replace if necessary.		
	→ The safety temperature limiter has not tripped.		
	Check fuse F3 on control board A1. Replace if necessary. Check main contactor Q1 and control board A1.		
	Check relay K1 on the control board. If necessary, use backup relay or replace control board.		
Troubleshooting the fan motor	Switch unit on "I".		
	— Check voltage supply at connector X1.		
	No voltage present. Fuse F1 blown. Replace power board for motor.		
	→ No voltage present. Fuse F1 is not blown. Check main contactor Q1 and control board A1.		
	→ Check output voltage at connector X2.		
	$\hookrightarrow$ No voltage present. Replace power board for motor.		
	→ Voltage present. Replace fan motor.		
Function check	The measurement values can be called up in the status overview.		

### 9.9 Fan defective. Cooking program was cancelled (701)

- **Description** The control board A1 does not receive any response via the CAN bus cable from fan motor M10.
- **Troubleshooting** (see "9.8 Fan defective or temperature limiter triggered (702) only for Compact^{*}, Page 51)

### 9.10 Water pressure too low (709)

- **Description** This fault message is displayed if the pressure switch registered a water pressure that is too low.
  - **Location** The pressure switch is on the DynaSteam steaming unit.

INFO	RMA ¹	ΓΙΟΝ
------	------------------	------

20.x pedestal units have two steaming units.

Naming on the circuit diagram	B14
Troubleshooting	Ensure on-site water supply to soft water connection of unit.
	The flow pressure at the water connection must be at least 2 bar.
	→ Check sieve on the water connection for soiling. To do this, remove the on-site water connection to the unit.
	For additional troubleshooting, swing out the air diverter in the cooking chamber.
	$\rightarrow$ Perform the DynaSteam test in the Service menu.
	Water runs through the water supply pipe into the cooking chamber.

- → Perform DynaSteam test again and check water quantity with measurement container.
  - ightarrow The water quantity corresponds to the set quantity (±10%). Replace pressure switch.
  - → The water quantity does not correspond to the set quantity (±10%). Ensure that the supply pipe is not clogged. Replace steaming unit.
- $\rightarrow$  Perform the DynaSteam test in the Service menu.
  - → No water runs through the water supply pipe into the cooking chamber.
- $\rightarrow$  Check water supply pipe for calcification.
- → Ensure that the hose between the steaming unit and supply pipe is not clogged.
- $\rightarrow$  Replace steaming unit.

### 9.11 Faulty CAN connection

**Description** There is a communication fault between the operating panel and control panel. In addition, temperature sensor and fan fault messages appear on the touchscreen.

Fault message displayed

**Troubleshooting** → Replace communication cable between operating panel and control panel circuit board.

- $\rightarrow$  Replace control board.
- $\rightarrow$  Replace operating panel.
