

Intelligent Connected Solutions
by Henny Penny

What is HennyLink?

HennyLink is Henny Penny's digital technology platform that connects fryer equipment, operational data, and Henny Penny expertise in one secure, cloud-based experience. A custom dashboard turns everyday fryer activity into clear, usable insights.

Less Downtime. Lower Costs. More Control.

By combining real-time fryer data with service and operational insights, HennyLink helps:

- Reduce delays in identifying and resolving issues
- Improve oil management and efficiency over time
- Support predictive maintenance and smarter service dispatch
- Simplify equipment oversight across single or multi-unit operations

It's another way Henny Penny supports long-term performance, not just at install, but every day after.

*** HennyLink is available for select Henny Penny fryers.**

Features and availability may vary by model and region.

HennyLink strengthens the connection between operators, distributors, service teams, and Henny Penny. Shared visibility means faster answers, better support, and decisions that protect both food quality and total cost of ownership.

How It Works

Authorized users can securely access real-time and historical data through a web or mobile dashboard.

HennyLink provides visibility into:

- Asset status and fryer utilization
- Operational KPIs like filtering activity and cook cycles
- Error codes and alerts for faster troubleshooting
- Oil and energy efficiency trends
- Firmware and recipe updates delivered over the air

The result: less guesswork, more consistency, and faster response when something needs attention.
